Wed, 19 Dec 2018 23:46:00 GMT Network Games: Learning and Dynamics - Asu Ozdaglar - 1As game theoretic models of network formation have been surveyed extensively elsewhere (see, for example, Jackson (2003, 2004, 2005b, 2008a, 2011), Goyal (2007), De Mart Beltran and Zenou (2011)), we concentrate here on games on networks. We also do not survey the literature on communication structures in cooperative games. studies the inefficiency of equilibria in noncooperative routing games, in which self-interested players route traffic through a congested network. Our goals are threefold: to introduce the most important models and examples of routing games; to survey optimal bounds on the price of anarchy, 11 Jan 2019 07:26:00 GMT CHAPTER 18 Routing Games - Stanford CS Theory - network is used as a starting point to predict (by means of graph-theoretic measures) the links that are likely to appear in the future. Predicting the structure of a social network when the network itself is totally missing while some other information (such as interest group membership) regarding the nodes is available.
