The circulatory system is controlled by homeostatic mechanisms, much as hydraulic circuits are controlled by control systems. Hemodynamic response continuously monitors and adjusts to conditions in the body and its environment. Thus hemodynamics explains the physical laws that govern the flow of blood in the blood vessels. Thu, 06 Dec 2018 02:11:00 GMT Hemodynamics - Wikipedia - Arterial blood pressure (ABP) is a basic hemodynamic index often utilized to guide therapeutic interventions, especially in critically ill patients. Sun, 02 Dec 2018 16:49:00 GMT Monitoring Arterial Blood Pressure: What You May Not Know - An air embolism, also known as a gas embolism, is a blood vessel blockage caused by one or more bubbles of air or other gas in the circulatory system. Air embolisms may also occur in the xylem of vascular

plants, especially when suffering from water stress. Air can be introduced into the circulation during surgical procedures, lung over-expansion injury, decompression, and a few other causes.
